GREETINGS TO OUR CUSTOMERS, OUR FRIENDS:

On this commencing of a New Year, we extend to you the Season's Greetings.

The war is over but the conditions remain serious. The world still faces a great shortage of food products.

America still must feed the world and that means we must all "Do our bit"; raise all the fruit, vegetables, grain and meat possible.

We are offering this season, the highest grade of seeds obtainable and, we believe, the best we have ever handled.

Our motto, Reliable, Tested Seeds.

We thank you for past business and trust to receive your valued orders.

ALFALFA

(*Medicago Sativa.*) One of the most valuable forage or pasture grasses being very nutritious, both as a green feed and as a hay. Often bears four or five crops a year and with irrigation, six or more. It does well in most any climate and improves the soil that is sown with it. The western part of Oregon, including the Willamette Valley, Rogue River, Umpqua and other valleys, are now raising alfalfa successfully and it is proving a very profitable crop. Price per lb. 30c; postpaid 35c; 100 lbs. \$25.00.

CLOVER SEED

The Largest Dealers in the Willamette Valley in Clover Seeds

We make a specialty of handling the very best grass and clover seeds that can be obtained. We have a large power cleaner and clean all our seeds before offering them to the market. The days of sowing any old seeds are past, as the up-to-date farmer knows that it pays to seed only with the best on the market. You will find our prices are as low as seeds of like quality can be sold for; the quality of the seeds we handle is so much better than some dealers handle, that there is no comparison, and they usually want as much for seeds of inferior quality as we ask for seeds of the HIGHEST QUALITY. Add parcel postage if sent by mail.

SUDAN GRASS**A New Forage Crop of Immense Value to the West**

Sudan Grass is strictly an annual and dies each year like Millet and must be seeded again each spring. This makes it fit admirably into any system of rotation and while it does not benefit the soil like legumes it does afford a change in crop and this is a good thing for the soil.

Summing it all up, Sudan Grass is a hay green feed crop which seems to be especially adapted to the drier regions of the middle western states. **Price, per lb., 40c postpaid; 100 lbs., market price.**

S-W Dry Powdered Arsenate of Lead. Sherwin-Williams Dry Powdered Arsenate of Lead is an exceedingly finely divided fluffy powder which is greater in bulk per given weight than any other powdered Arsenate of Lead on the market. This product stays in suspension almost indefinitely. S-W Dry Powdered Arsenate of Lead has maximum killing power, speedy action and unquestioned effectiveness in controlling all leaf eating and chewing insects. It can be

used with absolute safety to the fruit and foliage. This product is put up in sift proof impervious packages. Prices are as follows: $\frac{1}{4}$ lb. can 35c; lb. 65c; 5 lbs. \$2.75; 25 lbs. \$11. Subject to market changes. Cannot be sent by mail.

For winter spraying use one gallon of spray to nine gallons of water. Ready for use. Prices, per barrel \$9.75, with allowance of \$1 for return of barrel in good shape.

Sherwin-Williams Dry Lime-Sulphur. Containing Other Compounds. General. For many years growers have been using liquid Lime Sulphur Solution. They are thoroughly familiar with its use and the results it will accomplish, and there is no question whatever regarding its efficiency as a spraying material. It is a conceded fact, however, that the use of liquid Lime Sulphur Solution carries with it many disadvantages. For instance, it weighs approximately six hundred pounds to the barrel; it is very disagreeable to handle; there is considerable waste when using it, and it cannot be carried over safely on account of leakage, danger of freezing, etc.

Up to this time insecticide manufacturers have never been successful in their efforts to produce an ACTUAL dry powdered Lime Sulphur Solution. There have been substitutes for Lime Sulphur Solution such as, for instance, sodium, barium and other elements in combination with sulphur, but never a dry powdered material which would accomplish the same results as the liquid Lime Sulphur Solution.

After some years of research work, our chemists have developed the only actual Dry Lime-Sulphur on the market. It is not a substitute for Lime Sulphur Solution, but it is the actual material in dry powdered form. In the process of manufacturing Sherwin-Williams Dry Lime Sulphur, we must first make up the liquid Lime Sulphur Solution, meeting Government requirements, then by our own special process the water is evaporated, leaving the Dry Lime-Sulphur in concentrated form, requiring only the addition of water to produce a spray possessing all of the well known virtues of the Lime Sulphur Solution. It is safe, therefore, for us to claim that our material is not a substitute for Lime Sulphur Solution, but an actual Lime Sulphur in dry powdered form which possesses all the advantages of Lime Sulphur Solution with none of its disadvantages.

Dry Lime-Sulphur is very simple to use. It goes into solution in water almost instantly and spraying operations can be started immediately. It is simply a case of dumping the desired amount of powder in the spray tank, filling the tank with water and spraying operations start.

insects, chewing insects and fungus diseases—three sprays at one application—a great saving of expense to all fruit growers. Investigations to date strongly indicate that "Black Leaf 40," in combination with Bordeaux mixture, may be used without injury in any case where Bordeaux alone can be used. Having no control over the preparation of other insecticides and fungicides, we do not "guarantee" combined sprays.

LACTEIN

• Makes Hens Lay — Makes Hogs Pay •

Condensed Buttermilk

Lactein is a scientific product produced under perfect sanitary conditions from fresh buttermilk and whey at the creameries, cheese and casein factories of California.

Lactein is buttermilk and whey without the water. Lactein retains all the health-giving values and a uniform acidity without the useless bulk of water encountered in either whey or buttermilk and will keep pure and fresh under any condition or in any climate for any length of time.

Lactic Acid is a tonic. For years the greatest poultry experts in the world have recognized the value of sour milk as a food tonic—a regulator for poultry, but when they have undertaken to use raw buttermilk have run up against objections which more than offset the many advantages for its use in poultry feeding. In the main these objections were the excessive cost, inconvenience, trouble and expense of handling and the poor keeping qualities. Lactein eliminates every objection to the use of raw buttermilk and reduces the cost to a mere trifle.

For Poultry.—It will positively increase the egg production from 10 to 30 per cent. It will make your flock healthy and vigorous. It will prevent the many distressing diseases known to poultry. It will cut your losses 90 per cent in baby chicks. It will aid digestion, improve the appetite and increase assimilation. Any chicken raiser who will feed Lactein as directed for 30 days will thereafter never be without it.

For Pigs and Hogs.—It will keep the hogs strong and healthy. It not only keeps the digestive tract free from putrifying bacteria, but it promotes the growth of acid-forming bacteria and maintains a normal digestion, thereby making disease impossible. It is of great value as a muscle and bone builder, and especially for young pigs and brood sows. It is high in Lactic Acid, the best appetizing agent known.

It is real buttermilk super-soured and condensed, and when used as directed, we guarantee results or return what you have paid.

Directions for Feeding. First 10 days, 5 tablespoons to a gallon or 1 gallon to 50 gallons of water; later 1 to 40 and 1 to 30. Full instruction on each container.

Prices, 50 gal. \$31.20; 5 gal. \$4.
